COCA Update on WorkSafeBC Activities #571 December 2, 2013

New WorkSafeBC Web Portal Opens Up Information

WorkSafeBC has just posted a new information service on their website. The service provides open and accessible data. Contractors may use these resources to get general injury and industry stats, including claim costs and characteristics, as well as prevention and assessment information for each industry.

Statistics

The *WorkSafeBC Statistics* report provides data to support a better understanding of the causes and patterns of work-related injuries in B.C. Many of the stats tables in the report are available to download, in either .xlsx or .csv format.

Access the [stats tables](#) for download or review the *WorkSafeBC Statistics* report.

Industry Safety Information Centre

The [Industry Safety Information Centre](#) provides industry data that is open and accessible to anyone. You can review injury rates, claim costs and characteristics, prevention activities, and assessment rate information for each industry, right down to the classification unit level.

You can also download charts and graphs to use in your own presentations or reports.

To access the Industry Safety Information Centre, go to:

<https://online.worksafebc.com/anonymous/wcb.ISR.web/Default.aspx>
